1. DevOps Engineer Job Advertisement

Job Title: DevOps Engineer

Job Description:
We are seeking an experienced **DevOps Engineer** to join our dynamic team. The ideal candidate will have a strong background in infrastructure management, automation, and cloud technologies. You will work closely with development and operations teams to streamline the deployment pipeline, enhance automation, and improve system reliability.

Key Responsibilities:

- Implement and maintain CI/CD pipelines to automate deployments.
- Manage infrastructure using cloud platforms like AWS, Azure, or Google Cloud.
- Monitor system performance and resolve any operational issues.
- Collaborate with developers to ensure smooth deployment of new features.
- Write scripts for automation and configuration management (e.g., using Terraform, Ansible, or Puppet).
- Perform troubleshooting and root cause analysis on production issues.
- Ensure security best practices are followed in the infrastructure and software deployments.

Required Qualifications:

- 3+ years of experience as a DevOps Engineer or similar role.
- Proficiency in containerization and orchestration tools (e.g., Docker, Kubernetes).
- Strong experience with cloud platforms (AWS, Azure, GCP).
- Familiarity with infrastructure as code (Terraform, CloudFormation).
- Experience with CI/CD tools (Jenkins, GitLab CI, CircleCI).
- Strong scripting skills (Python, Bash, or similar).
- Excellent problem-solving and troubleshooting skills.
- Familiarity with monitoring and logging tools (Prometheus, ELK stack, Grafana).

Desired Skills:

- Experience with serverless architectures.
- Knowledge of networking and security in cloud environments.
- Experience with automated testing and quality assurance.
-
